Panasonic Fire & Security Europe

Panasonic Fire & Security Europe AB develops, manufactures, and sells world-class fire alarm and voice alarm systems in accordance with the global EN 54 standard. With a presence in more than 35 countries across the world, over 40 years of expertise in fire alarm solutions, and installations in more than 15,000 buildings, Panasonic delivers trusted fire safety technology.

Our solutions are designed not only to alert occupants to a fire, but also to guide them safely during an emergency through integrated fire alarm systems, PAVA voice alarm systems, and emergency and exit lighting that support faster, safer, and more controlled evacuations.

Safety innovation, our passion

We are fully devoted to the development and manufacturing of superior integrated fire alarm and voice alarm systems, offering a comprehensive portfolio of products that meet the highest quality standards. Our products are certified by VdS, including EN 54-13 system certificates, ensuring that all our components work perfectly together. Our systems provide reliable fire detection based on true Artificial Intelligence, along with remote monitoring and integration options.

Innovative technology

Panasonic is a global leader in R&D investments, and our company is no exception. With R&D centers in both Japan and Sweden, we are able to specialise in the technology suited to provide our customers and partners with the best solutions for their needs.

Addressable system

PAVA, a fully integrated smart voice evacuation system

Software integrated voice alarm system

Panasonic's PAVA connects directly with the Panasonic EBL fire alarm system through monitored TCP/IP communication. This allows fire alarm events, zones and faults to be shared automatically between both systems, so the right voice alarm actions can be triggered without extra relay modules, additional cabling or complex programming.

Reduced lifecycle cost

With fewer external components, the system reduces failure points, simplifies maintenance, and eases commissioning.

Lower hardware and installation cost

Eliminating relay modules reduces the bill of materials, cabling, and installation time.

Clear voice guidance for faster, safer evacuation

When every second counts, clear and intelligible voice messages help occupants understand what to do immediately, supporting faster evacuation and reducing panic in complex or multi-zone buildings.

More than safety, a complete communication platform

Support for daily public address and operational announcements, making Panasonic PAVA useful beyond emergency evacuation for routine paging, scheduled messages and general building communication.

Designed for today, ready for tomorrow

With its distributed architecture, advanced monitoring and network connectivity, Panasonic PAVA is designed for projects that may grow or change over time, from small installations to large, multi-site systems.

Seamless software integration for smarter life safety

The system is designed with a redundant control unit network and amplifiers to help maintain operation and keep emergency voice messages broadcasting if part of the system fails. Our voice alarm system features direct software-level

integration with the EBL fire alarm system. Alarm and fault information is exchanged via supervised digital communication, supporting precise zone-based evacuation strategies and continuous system monitoring.

Adjusts volume and sound clarity based on real-time noise sensor readings, maintaining a level difference of 5, 10 or 15 dB between voice messages and background noise. Frequency characteristics adapt dynamically based on room acoustics and SPL levels within each zone.

Adjusts the tempo and duration of live announcements made using PAVA system paging microphones, by detecting and shortening speech hesitations and prolonged sounds, allowing even unskilled operators to make clear, intelligible announcements in difficult acoustic conditions.

Control units

The control unit

The control unit is the main element of the Panasonic PAVA Voice alarm system, which receives audio signals and sends them to the entire system. It allows flexible configuration of audio signal tracks from any source of signal to any output. Global audio track switch is possible on the basis of the programmable logic system and Ethernet 1G (UDP/IP, TCP/IP) network.

All-in-one independent wall mounted units

Flexible speaker line monitoring:

Impedance measurement

Loop isolators

End-of-line device

Software Integration with Panasonic EBL Fire Alarm System

Redundant Amplifier to ensure voice messages continue if an amplifier fails

Integrated control unit with touchscreen, fireman's microphone, amplifiers and power supply units

Easy integration with SIP and IP Intercom

Up to:

16 speaker lines

1500 W speaker load (rms)

3 simultaneous messages per control unit

EXAMPLES

PAVA-4002LN: Wall mounted control unit with 4 zones, 2 simultaneous messages, touch screen display and built-in network switch.

PAVA-8003LNR: Rack mounted control unit with 8 zones, 3 simultaneous messages, touch screen display and built-in network switch.

Rack mounted control units

All-in-one independent rack mounted units

- › Software Integration with Panasonic EBL Fire Alarm System
- › Integrated control unit with touchscreen, fireman's microphone, amplifiers and power supply units
- › Up to 16 speaker lines
- › Up to 1500 W speaker load (rms)
- › Up to 3 simultaneous messages per control unit
- › Flexible speaker line monitoring:
 - › Impedance measurement
 - › Loop isolators
 - › End-of-line device
- › Easy integration with SIP and IP Intercom
- › Easy integration with building and management systems
- › Easy and flexible commissioning and service

PAVA-8003LNR configuration options*

32 speaker lines, 3000W configuration

Assembled 15U rack cabinet with PAVA-8003LNR and PAVA-8003R controllers.

16 speaker lines, 1500W configuration

Assembled 15U rack cabinet with PAVA-8003LNR controller.

Network cards

Default network board

For small sized systems where the control units are installed close to each other and standard LAN connections are enough.

- › 1 x LAN/WAN Port for programming or integration
- › 2 x LAN Port for networking

Optional “N” version network board

For larger or distributed systems where control units need to be connected over longer distances, by fiber, or with redundant network connections.

- › 1 x LAN/WAN Port for programming or integration
- › 2 x LAN Port for networking (One with PoE)
- › 1 x RS485 port
- › 2 x SFP port for Fiber Optic Networking
- › 2 x Logical Input with free programming
- › 2 x Logical Output with free programming

PAVA application examples

Stand-alone application

This application is ideal for installations such as supermarkets, supporting daily operations and in-store audio distribution.

Supports a large number of microphones for staff announcements

Enables live public announcements and background music

There are up to 16 separate speaker lines for flexible zoning and area control

Up to 3 simultaneous voice messages or music streams for each control unit

Multi-site networked configuration

This configuration represents a networked PAVA system connecting multiple sites to a central control location, enabling coordinated communication and system management across distributed facilities.

Easiest system expansion available

Microphones

PAVA-DFMS Fireman microphone

When every second counts, the fireman's microphone provides direct communication across the entire voice alarm system, enabling clear live announcements, instant activation of emergency messages, and immediate evacuation control for a fast, coordinated emergency response.

- › Full functionality even at system failure
- › Push-to-talk microphone
- › Three fully programmable keys
- › Supports up to five extension units
- › Intercom function between all fireman and zone microphones
- › Black-box function recording all announcements played during an alarm

Fully operational even if main CPU fails

PAVA-DFMS Fireman's microphone

					
150 x 55 x 210 mm	1.4 kg	-5 to +40 °C	< 80%	IP30	EN 54-16

Black-box recording for full alarm traceability

PAVA-DMS Zone microphone

The zone microphone provides clear, flexible paging across the voice alarm system, enabling live and pre-recorded announcements to selected zones.

- › Monitored connection of the unit within the system
- › Nine fully programmable function keys with configurable zones, priorities, and access rights
- › Supports up to five extension units
- › Intercom function between microphones
- › Built-in speaker
- › Stereo jack socket for audio inputs
- › Powered locally (48V) or via PoE

PAVA-DMS Zone microphone

					
120 x 55 x 210 mm	1.4 kg	-5 to +40 °C	< 80%	IP30	EN 54-16

PAVA-DMS-LCD Zone microphone with LCD

The zone microphone with LCD provides intuitive, efficient paging across the voice alarm system, enabling live and pre-recorded announcements to selected zones with fast access to system functions and flexible operational control.

- › 4.5" touchscreen LCD for quick navigation and control
- › Five fully programmable keys
- › Supports up to five extension units
- › Multiple audio inputs for flexible local source connection
- › Intercom function between all fireman and zone microphones
- › Built-in speaker
- › Stereo jack socket for audio inputs
- › Powered locally (48V) or via PoE

PAVA-DMS-LCD Zone microphone with LCD

					
150 x 55 x 210 mm	1.4 kg	-5 to +40 °C	< 80%	IP30	EN 54-16

PAVA-EKB-20M Microphone keyboard extension

Adds 20 functional buttons to fireman or zone microphones.

- › Freely programmable LED indicators for clear status feedback
- › Powered from fireman microphone/zone microphone (DFMS/DMS)
- › Up to 5 extension units can be connected to each microphone

PAVA-EKB-20M Microphone keyboard extension (20 buttons)

					
120 x 55 x 210 mm	1.4 kg	0 to +60 °C	< 80%	IP30	EN 54-16

Additional devices

PAVA-MC PAVA microphone cabinet

Secure, fire-service-ready installation.

- › Metal cabinet designed for built in mounting of the fireman microphone
- › Locked access using the same key type as the CIE

PAVA-MC PAVA microphone cabinet

410 x 290 x 128 mm

The right monitoring method for every project

Our PAVA solution supports multiple speaker line monitoring methods, providing greater flexibility, improved reliability, and compliance with EN 54-16 requirements. This allows system designers to choose the most efficient and cost-effective solution for each project while ensuring reliable operation, which offers a key advantage over most alarm systems.

Availability

Continuous real-time monitoring
for maximum system readiness

ABT-EOL End of line supervision module

This module provides continuous loudspeaker line monitoring without additional supervision cabling, helping to reduce installation costs, simplifying maintenance and fault monitoring.

- › Open circuit, short circuit, and ground leakage detection
- › Four power settings for flexible speaker line configuration
- › Powered directly from the amplifier
- › No additional supervision cabling required
- › Reduced cabling and installation complexity

Reduced installation costs by eliminating the need for extra supervision cabling

ABT-EOL End of line supervision module (10 pcs.)

				
65 x 16 x 37 mm	46 g	-10 to +55 °C	< 95%	EN 54-16

IS8200-1 Loop isolator

It protects loudspeaker circuits in voice alarm systems. Used with the LM8200 loop monitor, it provides continuous short-circuit monitoring, improving system reliability and fault tolerance in critical applications.

- › Continuous short-circuit monitoring
- › Short-circuit isolator for loudspeaker lines
- › Used with the dedicated AB loop monitor (LM8200)

IS8200-1

IS8200-1 Loop isolator

				
88 x 60 x 34 mm	100 g	-10 to +55 °C	< 95%	IP55

LM8200 Short-circuit isolator driver

This board monitors loop speaker lines used with IS8200 isolators, helping the system remain reliable in critical voice alarm applications.

- › Continuous loop monitoring
- › Up to 4 speaker loops
- › Loudspeaker configurations of up to 4 zones
- › Helps limit the impact of short-circuit faults

LM8200

LM8200 Short-circuit isolator driver

				
235 x 184 x 96 mm	3.5 kg	-5 to +45 °C	< 95%	IP20

ABT-REG1 Volume controller

It allows local adjustment of loudspeaker volume during normal operation and ensures emergency voice alarm messages always take priority. It provides great user comfort without compromising safety.

- › Wall mounted volume controller
- › Designed to control a 100 V signal
- › Maximum speaker / speaker group load is 40 W rms

ABT-REG1 Volume controller

*Emergency messages
always override
local volume*

WMC Wall mounted controller

The wall mounted controller makes day-to-day operation faster, easier, offering greater flexibility and a more user-friendly experience without needing access to the main control unit.

- › Intuitive and easy operation
- › 4.3" LCD touch screen for fast and clear source selection, routing and volume control
- › Bluetooth 5.0 to play audio wirelessly from a mobile phone or other bluetooth devices
- › Possible to connect a professional microphone or audio source

WMC Wall mounted controller

*Wireless audio control without
accessing the main unit*

BOX W / BOX F Housings for WMC

- › Wall and flush mounted housings for WMC

BOX W-m Wall mounted housing for WMC

BOX F-m Flush mounted housing for WMC

ABT-NSC6 Noise sensor controller

It automatically adjusts volume based on background noise, ensuring announcements stay clear without being too loud or too quiet.

- › Collection of audio data from up to 6 noise sensors and automatic volume control of background music and announcements in assigned speaker zones
- › Up to 6 speaker zones per controller
- › Up to 24 controllers per network for large-scale applications
- › Up to 144 monitored points/zones per system
- › Powered by an external power supply or PoE
- › TCP/IP allows digital communication with the PAVA system, making integration, configuration and expansion easier, with less dedicated cabling

Intelligent volume adjustment for optimal clarity

ABT-NSC6 Noise sensor controller

					
198 x 198 mm	1.2 kg	-5°C to +60°	< 95%	IP54 IP66	EN 54-16

ABT-NSM Noise sensors

ABT-NSM noise sensors are used with the ABT-NSC6 noise sensor controller to measure background noise in a zone. This allows the PAVA system to automatically adjust the volume of music and announcements, helping messages remain clear and comfortable as noise levels change.

ABT-NSM (A) Noise sensor indoor

- › Lightweight housing for indoor environments
- › 2 wire analogue connection up to 300 m from ABT-NSC6 noise sensor controller

ABT-NSM (A) Noise sensor indoor

				
Ø200 x 110 mm	1.5 kg	- 10 to +55 °C	< 95%	IP32

ABT-NSM (B) Noise sensor outdoor

- › Enclosure for severe outdoor conditions
- › Operation under extreme temperatures
- › 2 wire analogue connection up to 300 m from ABT-NSC6 noise sensor controller

ABT-NSM (B) Noise sensor outdoor

Built for extreme outdoor conditions

SMART-DU1604 Adaptive audio processor

It improves speech intelligibility in large or acoustically complex buildings where clear voice evacuation messages are critical. It processes announcements and data from noise-sensing microphones in real time, automatically optimising the audio so that messages remain clear and intelligible, even when background noise levels or room acoustics change.

- › Real-time processing of announcements and ambient noise data
- › High quality 48 kHz audio processing 32 bit resolution
- › Powerful, is processing 20 input streams, 20 audio output streams and up to 16 microphones ANSM-01

SMART-DU1604 Adaptive audio processor

Maintains speech clarity as acoustics and noise levels change

SMART-AMAP-6 Adaptive microphone aggregation point

The SMART-AMAP-6 processes signals from up to six monitored measurement microphones and transmits them digitally to SMART-DU1604 units. By continuously analysing background noise levels and loudspeaker output, adaptive filtering (AF) algorithms optimise audio performance within the assigned zones. Supporting SMART-ANSM-01 measurement microphones at distances of up to 400 meters, the SMART-AMAP-6 enables accurate acoustic monitoring across large and complex installations.

- › Powered by PoE or an external power supply
- › Compatible with the PAVA device network
- › Up to 6 controllers in a network
- › Each controller supports up to 6 SMART-ANSM-01 microphones

SMART-AMAP-6 Adaptive microphone aggregation point

						
482 x 44 x 325 mm	4.3 kg	-5 to +40 °C	<80%	IP20	EN 54-16 EN 54-4	1438-CPR-0948

SMART-ANSM-01 Adaptive noise sensing microphone

The measurement microphones are designed to measure sound level and frequency characteristics within a range of 100 Hz to 10 kHz (± 2 dB), and sound pressure levels from 50 dB to 120 dB. The microphone's specially designed electronics ensure stable measurement performance over long connection distances of up to 300 m. The dedicated housing is easy to install and has a discreet, attractive design with an unobtrusive appearance, making it ideal for a wide range of facilities.

- › Wide range of measurement dynamics
- › Discreet and elegant design
- › Compact size
- › Cable length of 3 m included
- › High resistance to weather conditions

Loudspeakers

PAVA loudspeaker selection guide

Choose the loudspeaker type according to mounting location, sound coverage, acoustic needs, and environmental conditions.

Ceiling mounted loudspeakers

For recessed mounting in indoor or outdoor ceilings, where discreet design is required. A good choice for suspended ceilings, rooms and circulation areas.

Sound projectors

Select when sound must be directed from a wall, ceiling or pendant position, providing focused voice coverage, especially in industrial areas, warehouses and corridors.

Surface mounted loudspeakers

Choose where suspended ceilings are unavailable, or where fast wall or ceiling mounting is preferred. Compact and discreet design for corridors, staircases, and public circulation areas.

Wall mounted loudspeakers

For rooms and circulation areas where ceiling installation is not suitable.

Horn type loudspeakers

Ideal for outdoor, industrial or high-noise areas requiring powerful directional speech. The robust design keeps voice messages clear over longer distances in demanding environments.

Line array speaker columns

For indoor or outdoor areas requiring longer coverage, uniform sound levels and precise direction. They focus audio on the listening area and reduce output towards ceilings, floors or unwanted areas.

2-way premium loudspeakers

For projects requiring higher sound quality for both speech and music. Ideal for public areas where both music and alarm performance, clear announcements and elegant design all matter.

A/B Loudspeakers

Select where two independent A/B loudspeaker lines are needed from a single speaker position. They provide redundancy, maintain coverage if one line fails and keep the installation cleaner with fewer visible loudspeakers.

Special loudspeakers

For demanding applications such as large open spaces, tunnels or hazardous areas. Designed for wide coverage, long-distance directionality or high environmental protection.

Ceiling mounted loudspeakers

ABT-S206B Ceiling mounted loudspeaker

A cost-effective solution for projects requiring clear voice messages, discreet ceiling installation, and the highest level of speech intelligibility even at high noise levels.

- › 6 W ceiling mounted loudspeaker for indoor environments
- › Suitable for environments with high noise levels
- › For suspended ceilings at both standard and high ceiling-to-floor distances
- › The highest level of speech intelligibility

ABT-S206B WHITE Ceiling mounted loudspeaker, Steel, 6 W, EN 54-24 ○

ABT-S206B BLACK Ceiling mounted loudspeaker, Steel, 6 W, EN 54-24 ●

									
Ø199 x 115 mm	1 kg	6 / 3 / 1.5 / 0.75 W	SPL@1 m, rated power, 101 dB	120 - 20000 Hz	- 10 to +55 °C	< 95%	IP32	EN 54-24	1438-CPR-0605

ABT-S206F Ceiling mounted loudspeaker

A durable ceiling-mounted solution for applications requiring excellent acoustic performance and aesthetics design.

- › 6 W ceiling mounted loudspeaker for both indoor and outdoor applications
- › For suspended ceilings at both standard and high ceiling-to-floor distances
- › Excellent acoustic parameters with high aesthetics
- › The highest level of both music and speech intelligibility for clear emergency guidance
- › Durable design with IK07 impact resistance

Ceiling speaker rated for outdoor use

ABT-S2010 Ceiling mounted loudspeaker

A higher-power ceiling-mounted solution for projects requiring an elegant look, clear voice messages, strong acoustic performance, and reliable sound coverage in indoor areas.

- › 10 W ceiling mounted loudspeaker for indoor environments
- › Suitable for suspended ceilings at both standard and high ceiling-to-floor distances
- › High efficiency that ensures the highest level of speech intelligibility

ABT-S2010 Ceiling mounted loudspeaker, Steel, 10 W, EN 54-24 ○

									
Ø200 x 110 mm	1.4 kg	10 / 5 / 2.5 / 1.25 W	SPL@1 m, rated power, 104 dB / 170° (1kHz)	150 - 20000 Hz	- 10 to +55 °C	< 95%	IP32	EN 54-24	1488-CPR-0170/W

Sound projectors

ABT-P10 Sound projector

A robust, cost-effective solution for projects requiring clear directional sound, flexible wall or ceiling mounting and an elegant design in humid or demanding conditions.

- › 10 W sound projector
- › Ideal for both ceiling and wall installation
- › Designed to achieve directional sound emission
- › Due to resistance to weather conditions, the loudspeakers prove excellent in industrial halls, warehouses, as well as partly open spaces exposed to outdoor weather conditions
- › High sound quality in music and speech emission

Precise sound direction towards required area

ABT-P10 Sound projector, ABS, 10 W, EN 54-24 ○

									
Ø135 x 205 mm	1.6 kg	10 / 5 / 2.5 / 1.25 W	SPL@1m, rated power, 100 dB	130 - 20000 Hz	- 25 to +70 °C	< 95%	IP66	EN 54-24	1438-CPR-0701

ABT-P10P Sound projector

A loudspeaker designed for projects requiring clear voice messages in spaces where standard ceiling loudspeakers are too far from the listening area.

- › 10 W sound projector
- › The loudspeaker is intended for pendant mounting, featuring an extra junction box that allows for easy and fast installation
- › Used wherever the distance from a ceiling mounted speaker is too large
- › High sound quality in music and speech emission

ABT-P10P Sound projector, ABS, 10 W, EN 54-24 ○

									
Ø135 x 205 mm	2 kg	10 / 5 / 2.5 / 1.25 W	SPL@1 m, rated power, 100 dB	130 - 20000 Hz	- 25 to +70 °C	< 95%	IP66	EN 54-24	1438-CPR-0701

ABT-P10BD Bidirectional sound projector

A robust bidirectional voice alarm solution for demanding environments, delivering sound in opposite directions for powerful coverage, clear speech intelligibility and flexible wall or ceiling mounting.

- › 10 W bidirectional sound projector
- › Fireproof casing with ceramic block and thermal fuse
- › IP65 housing for demanding outdoor environments
- › Best use: a robust solution for projects requiring clear voice messages in corridors, hallways, and circulation areas where sound must be distributed in both directions

**Fireproof casing
with ceramic block
and thermal fuse**

ABT-P10BD Bidirectional sound projector, Aluminium, 10 W, EN 54-24 ○

ABT-P20 Sound projector

A robust solution for projects requiring powerful directional sound, clear speech intelligibility, and flexible wall or ceiling mounting in demanding environments.

- › 20 W sound projector
- › For both ceiling and wall installation
- › Excellent in industrial halls, warehouses, as well as partly open spaces exposed to outdoor weather conditions
- › Fireproof casing with ceramic block and thermal fuse
- › High sound quality in music and speech emission

ABT-P20 Sound projector, Aluminium, 20 W, EN 54-24 ○

									
Ø143 x 210 mm	2.4 kg	20 / 10 / 5 / 2.5 W	SPL@1 m, rated power, 102 dB	130 - 20000 Hz	- 25 to +70 °C	< 95%	IP66	EN 54-24	1438-CPR-0702

Surface mounted loudspeakers

ABT-SW176 Surface mounted loudspeaker

A cost-effective and compact surface mounted solution for projects requiring clear voice messages, flexible installation and discreet design where a built-in solution is not desired or possible.

- › 6 W surface mounted loudspeaker for indoor environments
- › The loudspeaker can be mounted both on a wall and on a ceiling
- › Ideal for any circulation routes and in staircases located in shopping centres, offices, schools, hotels, hospitals, and industrial buildings
- › High sound quality in music and speech emission

ABT-SW176 WHITE Surface mounted loudspeaker, Steel, 6 W, EN 54-24 ○

ABT-SW176 BLACK Surface mounted loudspeaker, Steel, 6 W, EN 54-24 ●

Ø170 x 80 mm	1.2 kg	6 / 3 / 1.5 / 0.75 W	SPL@1 m, rated power, 97 dB	130 - 20000 Hz	- 10 to +55 °C	< 95%	IP32	EN 54-24	1438-CPR-0738

Wall mounted loudspeakers

ABT-W6W Wall mounted loudspeaker

A discreet wall mounted solution for projects requiring clear voice messages, flexible installation and good sound quality in standard indoor areas, especially where suspended ceilings are not available.

- › 6 W wall mounted loudspeaker for indoor environments
- › Perfect on any circulation routes and in staircases located in shopping centres, offices, schools, hotels, hospitals, industrial buildings, technical rooms, and rooms without suspended ceiling
- › High sound quality in music and speech emission

ABT-W6W Wall mounted loudspeaker, MDF, 6 W, EN54-24 ○

254 x 196 x 78 mm	1.8 kg	6 / 3 / 1.5 / 0.75 W	SPL@1 m, rated power, 96 dB / 180° (1 kHz)	130 - 20000 Hz	- 10 to +55 °C	< 95%	IP32	EN 54-24	1438-CPR-0699

ABT-W6 Wall mounted loudspeaker

An elegant wall mounted solution for projects requiring clear voice messages, strong aesthetics and flexible installation in indoor areas.

- › 6 W wall mounted loudspeaker for indoor environments
- › Suitable for recessed installation, making it ideal for spaces where aesthetics is important
- › Perfect in staircases, corridors, hotel rooms, classrooms, technical rooms, underground garages and rooms without suspended ceiling
- › High sound quality in music and speech emission

ABT-W6 WHITE Wall mounted loudspeaker, Steel, 6 W, EN 54-24 ○

ABT-W6 BLACK Wall mounted loudspeaker, Steel, 6 W, EN 54-24 ●

									
260 x 180 x 80 mm	1.8 kg	6 / 3 / 1.5 / 0.75 W	SPL@1 m, rated power, 101 dB / 180° (1 kHz)	120 - 20000 Hz	- 10 to +55 °C	< 95%	IP32	EN 54-24	1438-CPR-0654

ABT-W6F Wall mounted loudspeaker

A highly durable wall mounted solution for projects requiring clear voice messages, strong aesthetics and reliable performance in both indoor and outdoor demanding environments.

- › 6 W wall mounted loudspeaker for indoor and outdoor applications
- › Flush mounting option, ideal for interior spaces where high aesthetics is required
- › Perfect in staircases, corridors, hotel rooms, classrooms, technical rooms, underground garages and rooms without suspended ceiling
- › Durable design with IK07 impact resistance
- › High sound quality in music and speech emission
- › Highest level of speech intelligibility for clear emergency guidance

Flush mounting option with outdoor-rated protection

ABT-W6F Wall mounted loudspeaker, Steel, 6 W, IP44 ○

									
260 x 180 x 80 mm	1.8 kg	6 / 3 / 1.5 / 0.75 W	SPL@1 m, rated power, 99dB / 135° (1 KHz)	120 - 20000 Hz	-25 to +70 °C	< 95%	IP44	EN 54-24	1438-CPR-0654

Horn type loudspeakers

ABT-T1410 / ABT-T2015 Horn type loudspeakers

A robust solution for projects requiring powerful, directional voice messages in outdoor, industrial and a high level of background noise.

- › Horn type loudspeakers for indoor and outdoor environments
- › Suitable for wall or ceiling mounting
- › Perfect for sport sites, at swimming pools, in expo and industrial halls, warehouses, open and underground car parks, and in open areas such as stadiums, parks, etc.
- › Directional characteristic of sound emission and the highest verbal communication understanding

ABT-T1410 Horn type loudspeaker, ABS, 10 W, EN 54-24 ●

ABT-T2015 Horn type loudspeaker, ABS, 15 W, EN 54-24 ●

ABT-T2430 Horn type loudspeaker

A powerful and robust solution for projects requiring clear directional voice messages, weather resistance and reliable operation in outdoor, industrial or high-noise environments.

- › 30 W horn type loudspeakers for indoor and outdoor environments
- › Suitable for wall or ceiling mounting
- › Perfect for sport sites, at swimming pools, in expo and industrial halls, warehouses, open and underground car parks, and in open areas such as stadiums, parks, etc.
- › Directional characteristic of sound emission and the highest verbal communication understanding

ABT-T2430 Horn type loudspeaker, ABS, 30 W, EN 54-24 ●

Line array speaker columns

ABT-LA10B / 20B / 30B / 40B Line array speaker columns

Powerful loudspeaker, designed for indoor and outdoor areas requiring clear, directional voice messages, uniform sound levels and reliable long-distance sound coverage.

- › Line-array loudspeaker columns available from 10 W to 40 W
- › Both in outdoor and indoor environments
- › High sound quality for both speech and music
- › Highest level of speech intelligibility
- › The sound is directed precisely towards the intended audio area, avoiding unwanted locations such as the ceiling or floor
- › Ideal for mounting on a ceiling, wall or pole
- › Mechanical impact rating IK07

ABT-LA10B Line array speaker, Aluminium, 10 W, IP65, IK07, EN 54-24 ●

ABT-LA20B Line array speaker, Aluminium, 20 W, IP65, IK07, EN 54-24 ●

ABT-LA30 / LA60 Line array speaker columns

Designed for indoor and outdoor areas requiring longer coverage, precise sound direction and flexible sound beam adjustment for different listening areas.

- › 30 W and 60 W line array loudspeaker columns
- › Both for outdoor and indoor environments.
- › The sound is directed precisely towards the intended audio area, avoiding unwanted locations such as the ceiling or floor
- › Adjustable sound beams for more flexible coverage of different listening areas

Adjustable sound beam for precise coverage

2-way premium loudspeakers

ABT-S2030 Ceiling mounted 2-way loudspeaker

Indoor ceiling installations requiring higher power, excellent sound quality, and a discreet design to blend into any interior.

- › 30 W ceiling mounted 2-way loudspeaker for indoor environments
- › Two-way design for excellent sound quality
- › The loudspeaker is easy to install in suspended ceilings
- › Discreet design that complements interior spaces without disrupting their design

ABT-S2030 Ceiling mounted 2-way loudspeaker, Steel, 30 W, EN 54-24 ○

									
Ø204 x 130 mm	2 kg	30 / 20 / 15 / 10 W	SPL@1 m, rated power, 102 dB	70 - 20000 Hz	-10 to +55 °C	< 95%	IP32	EN 54-24	1438-CPR-1086

ABT-M15 / M30 / M50 Wall mounted 2-way loudspeaker

Projects requiring high-quality speech and music reproduction and an elegant wall mounted solution for public areas.

- › Wall mounted 2-way loudspeakers for indoor and outdoor applications
- › High sound quality: two-way design provides full and clear sound
- › Ideal for use in galleries, restaurants, schools, hotels, hospitals, and other public spaces
- › Elegant design suitable for a wide variety of interiors

A/B loudspeakers

ABT-S226/AB Ceiling mounted A/B loudspeaker

Indoor ceiling installations requiring A/B line redundancy, reliable voice alarm coverage and a cleaner ceiling layout with fewer visible loudspeakers.

- › Ceiling mounted A/B loudspeaker for indoor environments
- › Designed for rooms where a single ceiling loudspeaker must connect to two independent A/B loudspeaker lines
- › Provides line redundancy from one discreet ceiling position
- › Helps maintain voice alarm coverage if one line fails
- › Highest quality of sound even in difficult conditions

ABT-S226/AB Ceiling mounted AB loudspeaker, Steel, 2 x 6 W, EN54-24 ○

									
Ø220 x 115 mm	1.8 kg	2 x 6 / 3 / 1.5 / 0.75 W	SPL@1m, rated power, 99 dB	150 - 20000 Hz	-10 to +55 °C	< 95%	IP32	EN 54-24	1438-CPR-0899

ABT-SW176/AB Surface mounted A/B loudspeaker

Indoor surface-mounted installations requiring A/B line redundancy, reliable voice alarm coverage, and a discreet design for public circulation areas.

- › Surface mounted A/B loudspeaker suitable for indoor environments
- › Suitable for both wall and ceiling installation
- › Connects to two independent A/B loudspeaker lines
- › Provides line redundancy from one discreet surface-mounted position
- › Perfect on any circulation routes and in staircases located in shopping centres, offices, schools, hotels, hospitals, and industrial buildings
- › Discreetly blends into its environment due to its compact size and clean white finish

ABT-SW176/AB Surface mounted AB loudspeaker, Steel, 2 x 6 W, EN 54-24 ○

with recessed
installation option*

ABT-W6/AB Wall mounted AB loudspeaker, Steel, 2 x 6 W, EN 54-24 ☐

									
260 x 180 x 80 mm	2.3 kg	2 x 6 / 3 / 1.5 / 0.75 W	SPL@1 m, rated power, 104 dB / 165° (1 kHz)	150 - 20000 Hz	-10 to +55 °C	< 95%	IP32	EN 54-24	1438-CPR-1145

Special loudspeakers

ABT-OMN100 Omnidirectional loudspeaker

Large volume indoor spaces requiring wide, uniform sound coverage from one pendant loudspeaker, especially where ceiling height or open layouts make standard loudspeakers less effective and fewer speaker positions are preferred.

- › 100 W omnidirectional pendant loudspeaker for indoor environments
- › 360° coverage for uniform sound distribution across large open areas
- › High speech intelligibility for clear emergency guidance
- › Ideal for use in spacious areas like airports, high-bay warehouses, sports arenas, shopping malls, train stations, museums, and similar locations
- › Effective sound coverage of areas up to 900 m²

ABT-OMN100 Omnidirectional loudspeaker, Aluminium, 100 W

									
Ø750 x 400 mm	24 kg	100 / 50 / 25 W	SPL@1 m, rated power, 113 dB / 145° H / 145° V	60 - 20000 Hz	-10 to +55 °C	< 95%	IP42	EN 54-24	1438-CPR-1113

Covers up to 900 m²
from a single position

ABT-TNL100 Long range tunnel speaker

Tunnel voice evacuation projects where high power output, long distance coverage, speech clarity, and reduced echo are critical.

- › 100 W long range tunnel loudspeaker for outdoor environments
- › Highly directional sound for tunnel environments
- › Used in tunnels that require voice evacuation systems for clear audio guidance to safety
- › Excellent speech intelligibility for emergency communication
- › Helps direct sound towards the listening area and reduce echo effects

ABT-TNL100 Long range tunnel speaker, Steel, 100 W, EN 54-24

									
1714 x 1020 x 450 mm	34 kg	100 / 50 W	SPL@1 m, rated power, 131 dB / 22° (1 kHz)	250 - 8000 Hz	-25 to +70 °C	< 95%	IP66	EN 54-24	1438-CPR-0778

Directional sound designed
to reduce tunnel echo

ETH20MD Explosion proof horn loudspeaker

Hazardous industrial areas requiring clear voice messages, explosion-proof protection, and reliable operation in demanding environmental conditions.

- › 25 W explosion proof horn loudspeakers
- › Designed for use in potentially explosive gas and dust atmospheres
- › Ex db IIB+H2 Gb Ex tb IIIC Db II2GD T6 T5
- › Ex db IIC Gb Ex tb IIIC Db II2GD T6 T5
- › High degree IP66 protection to withstand the harsh off-shore and on-shore plants environmental conditions
- › Zone 1, zone 2, zone 21 and zone 22 areas

Network equipment

GS110TP Network switch

GS110TP switch is ideal for small and medium sized PAVA installations that require network connectivity and PoE powering local devices such as microphones, controllers, IP interfaces and other networked equipment. This reduces cabling complexity, while fiber SFP uplinks also make it suitable for longer cable runs or connection to the main network.

- › 8-port Gigabit PoE smart managed switch with 2 fiber SFP uplinks
- › Powers connected PoE devices through a single Ethernet cable, reducing cabling complexity
- › Up to 15.4 W per port, with a total PoE budget of 46 W
- › Enhanced VLAN, QoS, access control list (ACL), 802.1x port authentication (MD5), rate limiting and IGMP snooping for secure and prioritised network traffic
- › 2 fiber SFP uplinks for longer-distance network connections
- › Fanless compact design for silent operation in noise-sensitive areas
- › Automatic power-saving features to help reduce energy use

GS110TP Switch, 8xPoE (max 46 W), 2 x SFP; no spanning-tree no STP

SFP modules

An SFP module is a small plug-in transceiver used to connect network switches or PAVA devices to fiber or copper cabling. It is mainly used for longer-distance links and flexible connections between racks, buildings, floors or technical rooms. SFP modules help extend the PAVA network beyond standard Ethernet distances, improve installation flexibility and support reliable communication.

Multi-mode fiber (MMF) SFP modules

Used for short to medium-distance fiber links, typically within the same building or campus. Ideal for reliable high-speed connections between nearby racks, switches or technical rooms, with reduced risk of electrical interference.

SF-MM31002D-GP	SFP module: 1.25 Gbps SX+ 1310 nm LC DDM MMF 2 km
SF-MM31WD055D-GP	SFP module: WDM 1.25 Gbps 1310 nm Tx/1550nm LC DDM MMF 550 m
SF-MM55WD055D-GP	SFP module: WDM 1.25 Gbps 1510 nm Tx/1350 nm LC DDM MMF 550 m
SF-MMS55WD055D-GP	SFP module: WDM 1.25 Gbps 1510 nm Tx/1350 nm SC DDM MMF 550 m
SF-MMS31WD055D-GP	SFP module: WDM 1.25 Gbps 1310 nm Tx/1510 nm SC DDM MMF 550 m

Single-mode fiber (SMF) SFP modules

Used for long-distance fiber links between buildings or remote technical areas. Ideal for large or distributed PAVA installations requiring stable communication over longer distances.

SF-SMS31WD020D-GP	SFP module: WDM 1.25 Gbps 1310 nm Tx/1550 nm SC DDM SMF 20 km
SF-SMS55WD020D-GP	SFP module: WDM 1.25 Gbps 1550 nm Tx/1310 nm SC DDM SMF 20 km

Copper (RJ45) SFP module

Used when an SFP port needs to connect to standard Ethernet copper cabling instead of fiber. Ideal for short links up to 100 m using existing Cat5e/Cat6 cabling, helping reduce installation cost and complexity.

SF-CP100C-GP	SFP module: 10/100/1000 TX UTP 100 m
--------------	--------------------------------------
