

EBLCloud

With the introduction of EBLCloud is the next step into the connected future taken. By connecting your fire alarm system to EBLCloud you will get extended possibilities for a safe and secure remote monitoring and operation of your EBL fire alarm systems. Additionally, you will get a powerful service tool that will allow you full traceability of the system development, remote programming as well as complete log of services, disablements, etc.

Full administration rights as a Panasonic partner will give you the possibilities to invite and administrate the access to the cloud services, and to assign the users the access rights you like them to have.

Features

- › System status
 - detectors
 - loop communication
 - power and batteries
- › Back-up and storage of SSD files
